Community Engagement Project: - Approval Sheet

•	Project Title	ABLE – Awareness & Assistance Portal
•	Brief Project Description	The current societal infrastructure presents a critical failure in information accessibility for Persons with Disabilities (PwDs). Essential resources—such as government welfare schemes, real-time physical accessibility data for public spaces, and localized community assistance networks—are severely fragmented across disconnected channels. This systemic fragmentation actively isolates vulnerable individuals from daily community participation. ABLE is a centralized, community-focused digital platform engineered to resolve this specific information gap. By integrating targeted disability awareness educational modules, an interactive, localized directory for accessibility mapping, and a direct dispatch system for assistance requests into a single cohesive ecosystem, ABLE provides a concrete technological solution to a critical social barrier. The portal structurally empowers users to locate essential support independently while simultaneously mobilizing the local community to fulfill on-the-ground volunteer requests, directly addressing the core mandate of actionable community engagement.
•	Project Group member Details	• Sanjivani Sanjay Adagale – 22201 • Vaishnavi Suresh Angadi – 22203 • Amol Tejrav Daund– 22211 • Sarthak Bhaskar Gite – 22220
•	Community Addressed	This project directly serves and connects a symbiotic local ecosystem comprising four distinct demographics. The primary beneficiaries are Persons with Disabilities (PwDs) seeking verified physical accessibility data and direct on-demand community assistance. The secondary group includes Families and Caregivers, who act as the support network requiring consolidated information on rehabilitation, specialized educational resources, and complex government schemes. The third group consists of Local Volunteers, who serve as the active enablers mobilized to execute physical assistance requests and support local awareness drives. Finally, the General Public is engaged as advocates, utilizing the platform to learn essential disability etiquette, crowdsource reports on localized accessibility failures, and normalize an inclusive environment.

• Objective	To architect and deploy a centralized digital ecosystem that bridges the current physical and informational accessibility gap. The platform connects vulnerable individuals directly with verified support resources, educational materials, and actionable, localized volunteer networks to foster immediate community inclusion.
• Outcomes	• Establishment of a reliable, crowdsourced digital directory designed to identify and verify accessible public infrastructure, eliminating physical barriers. • Deployment of a streamlined community dispatch system that interfaces urgent accessibility needs with registered local volunteers for rapid, on-the-ground support. • Consolidation of highly fragmented government schemes, educational materials, and rehabilitation networks into an easily navigable, centralized interface. • Active societal inclusion fostered by equipping the general public with standardized disability awareness education and practical tools to audit local accessibility compliance.
• Required Resources:	• Stakeholder Partnerships: Collaboration with the Pune Municipal Corporation (PMC) Social Welfare Department for verified schemes, and local NGOs or special educators for content validation. • Volunteer Network: Coordination with the college National Service Scheme (NSS) unit to mobilize student volunteers for on-the-ground assistance. • Data & Field Tools: Official circulars from the Department of Empowerment of Persons with Disabilities (DEPwD/UDID), along with standardized physical survey checklists for local accessibility audits. • Technical Infrastructure: Standard open-source web technologies (HTML5, CSS3, JavaScript) for platform development, requiring zero budget and hosted on free institutional/open-source tools. • Administrative Clearances: Official college permission letters to conduct authorised accessibility surveys in nearby transit and public spaces .
• Approval Remark:- (To be filled by staff)
