Introduction & The Idea

ABLE is an accessibility and inclusion platform designed to help persons with disabilities, the elderly, and injured citizens connect with verified volunteers, report physical barriers, and navigate public spaces with dignity and independence.

The idea is to bring emergency assistance, volunteer dispatch, crowdsourced physical barrier reporting, and verified accessible public transit resources together in one clear, easy-to-navigate experience.

GOAL: MAKE ACCESSIBLE SUPPORT & VOLUNTEERING EASIER TO ACCESS

01 On-Demand Assistance

Quick access to verified student & NSS volunteers for immediate on-ground physical guidance and wheelchair navigation.

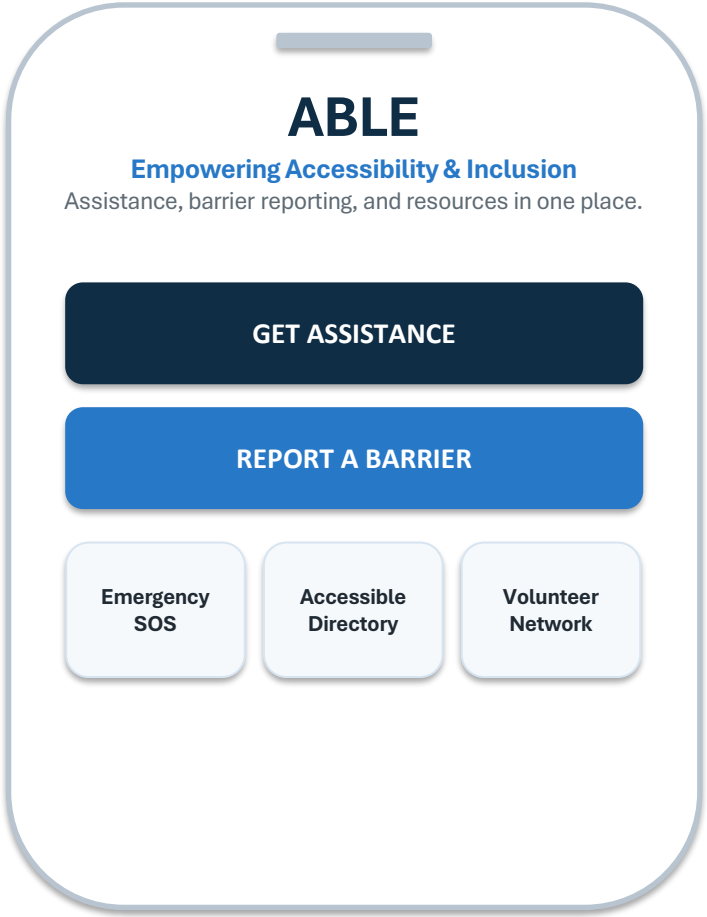

02 Barrier Reporting

Geo-tagged reporting of physical infrastructure barriers like broken ramps, blocked tactile tiles, and out-of-order lifts.

03 Directory & Resources

Curated directory of accessible public spots, inclusive transit maps, legal rights awareness, and assistive schemes.

Prototype: Home Screen Concept

Illustrative concept — backed by live Python Flask & SQLite.

PROTOTYPE FOCUS

- Simple navigation and prominent, high-contrast primary actions
- Clear pathways to physical assistance, barrier reporting, and accessible facilities
- Mobile-friendly, responsive layout adhering strictly to WCAG touch standards (44px+)
- Short, accessible labels paired with assistive screen-reader and voice support
- Guides users toward a clear, friction-free next step with zero cognitive overload
- Live volunteer dispatcher with Leaflet.js interactive maps and verified NSS student profiles
